Position description

Altoros is looking for a Sr. DevOps engineer with 5+ years of experience working in a fast-paced, rapidly changing environment. Ideal candidate will have broad experience with system administration, virtualization, scripting and working with open source tools and technologies. Primary responsibilities will be to build, automate, manage and monitor environments, infrastructure and tools to empower and facilitate development teams to continuously integrate and deliver solutions.

Our main focus is on the OSS Platform as a Service (PaaS) CloudFoundry project (cloudfoundry.org). In this role you will build open source solutions, involving integration of existing products with CloudFoundry, development and maintenance of other cloud platforms for it. If you are excited to work on open source and to gain a unique experience in it, we'll be glad to see you in our team!

Job Responsibilities:

- *Work closely with development, QA and Release engineering teams.*
- *Automate hardware provisioning and application installation.*
- *Build tools to allow self-service of Dev infrastructure supporting multiple products.*
- *Build, manage and monitor virtualized cloud environments that support product development.*
- *Build, manage and monitor Linux servers running tool that facilitate product development.*
- *Build monitoring and alerting infrastructure to measure performance, utilization and failures.*

Required Qualifications:

- *Advanced Linux knowledge*
- *Experience in systems and/or network administration with strong scripting ability. (Shell, Python, Ruby, Perl, etc)*
- *Experience with Amazon Web Services IaaS*
- *Good troubleshooting skills with attention to detail*
